

## Infrastructure

### What does the existing OCP say?

- Aims to provide municipal infrastructure that protects public health and safety.
- Seeks to reduce and/or effectively manage impacts on the environment and climate change.
- Lists infrastructure projects that were identified in master servicing plans.

### What We Heard

- Infrastructure planning is a high priority for you and should be a high priority for us.
- Land north of the Nechako River is constrained by a lack of servicing capacity.
- We should invest in upgrading existing infrastructure rather than servicing new growth areas.
- Upgrades to existing services and utilities are required for businesses to thrive in PG.
- We should build infrastructure that better connects us to the riverfront.

**Municipal infrastructure provides the foundation for our community and includes water supply and distribution, sewage collection and wastewater treatment, stormwater management, roads, solid waste management and recycling and utilities.**

### Proposed Policy Direction

- Focus growth and development in existing built-up areas where services already exist.
- Better align infrastructure planning with growth management planning.
- Incorporate more green infrastructure policies to better protect air, water, nature and wildlife.
- Introduce infrastructure policies that address climate change and emergency preparedness based on the latest science, technology and best practices.
- Provide for the regular updating of master servicing plans.
